

S2 Stinger

Specter Arms

"While you are debating whether or not you feel it is a good idea to incorporate .22LR training as a supplement to your normal regimen, just remember: if it is a choice between training with a .22LR and not training at all, always choose the former over the latter."

SWAT Magazine
Page 28, Nov 2008

Nothing is more true than the words spoken by SWAT magazine in its November, 2008 issue.

Ammo costs are rising and the professional and the competition shooter need to train to be effective.

Industry has responded by providing toys. Lightweight, flimsy, plastic 22s dominate the market. The thought process is: 22 ammo is cheap, shouldn't a 22 caliber rifle be cheap as well?

Specter Arms disagrees.

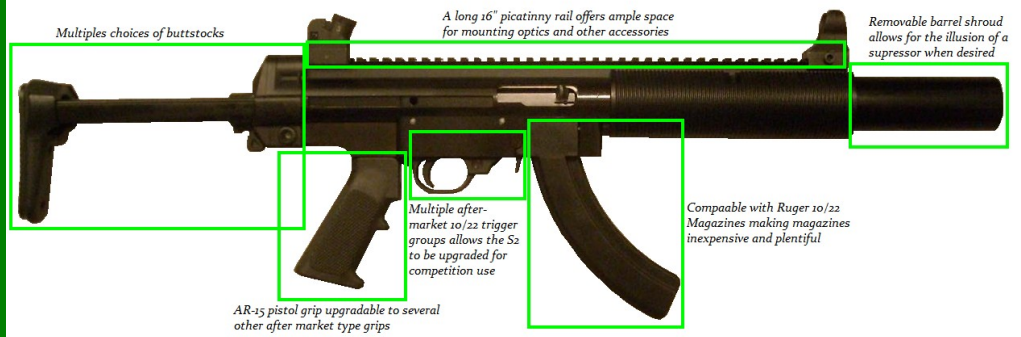

The Specter Arms S2 Stinger is a solid high quality rifle constructed to 7075 aircraft aluminum. It is no flimsy toy weighing in at 3.0kg unloaded.

The S2 has a variety of features.

To minimize the transfer of vibration from the shooter into the rifle, the barrel of the S2 is free floated. Unlike its competition, the free floated barrel has a uniform diameter over 7/8". The large size means it is less affected by heat from prolonged firing and the larger surface area allows for the greater convection of heat away from the barrel to speed cooling.

The barrel is threaded with a standard 1/2x28 TPI thread to accept AR15 flash hiders, muzzle breaks and sound suppressors.

But the threaded barrel is not the only customizable component. The pistol grip is a standard AR15 type allowing the end user the option of several pistol grips. No person is the same, why should everyone use the same grip?

There are several options for buttstocks. Currently Specter Arms offers a wire stock and a fixed stock. To comply with Canadian Law, Specter Arms fixes the stocks so they do not telescope or fold to a length that would re-classify it as a restricted firearm.

The S2 has a full-length picatinny rail across the top. The user can select from a world of iron sights, reflex sights, red dot sights, lasers, lights and scopes.

The S2 uses a Ruger 10/22 trigger group meaning it can be replaced with after-market trigger groups such as Volquartsen further allowing the end-user to customize the rifle to his needs.

Modern CQB techniques require the operator never take his dominant hand off the pistol grip. With most of the population being right handed it does not make sense to only have the cocking handle on the inaccessible right side of the gun. The S2A2 offers a cocking handle on the left side conveniently above the handguard to make manipulations of the firearm easier. For those who are left-handed or don't need the extra expense of the left-side cocking mechanism, the S2A1 still offers a bolt mounted cocking handle on the right side.

As a rimfire, the S2 has no legal limit, in Canada, for magazine capacity. 10, 25, 30, 50 and 100 round magazines are all legal. Best of all, the S2 takes commonly available 10/22 magazines.

The S2 is the answer to high ammo costs offering unparalleled quality, customization and performance. The price may seem high but you get what you pay for; nothing else on the rimfire market comes close. Nothing else on the rimfire market can even compare.

S2 Stinger; Train Harder.

Tactical 22 Firearm Comparison

	Free Floated Barrel	Heavy Barrel	Threaded Flash Suppressor	Metal Construction	Ramped Chamber for Imp. Feeding	Full Length Picatinny Rail	Non-Restricted
Smith & Wesson M&P15-22	Red	Red	Red	Red	Red	Green	Red
Remington 597 VTR	Red	Green	Red	Green	Red	Red	Green
Colt/Umarex 22LR AR15	Red	Red	Green	Red	Red	Green	Red
Ruger SR22	Red	Green	Red	Green	Red	Red	Green
Mossberg Tactical 22	Red	Red	Green	Green	Red	Green	Red
